<sup>1</sup>The Federal Polytechnic Bida, Bida, Niger State, Nigeria.

---

### Abstract

*Gender inequality exists all over the world, in access to and control of vital resources, in educational, economic and political opportunities. This paper investigates gender differences in enrollment pattern for Accountancy programme in Nigeria Federal polytechnics. The National Bureau of Statistics (NBS) obtained data from the 2011, and 2012 editions of Annual Abstract of Statistics Published. Data were analyzed using descriptive statistical methods. Percentages were used to describe annual changes in enrolment. Sex ratio was used to quantify the gender dimension of enrolment. Result show that in all academic sessions examined, males are consistently more in enrolment than females: more females are consistently enrolled at the ND level than the HND level. This paper suggested that current efforts to-rebrand the Nigeria education system must take cognizance of the level of disparities between males and females for all programmes at the tertiary education level; and devise means of bridging the gender gap.*

**Keywords:** Gender; Enrolment; Accountancy; Education; Inequality

---

### INTRODUCTION

Gender inequality is a contemporary worldwide concern. It exists in all spheres of life and in virtually all countries. Gender inequalities exist in access to and control of vital resources, in educational, economic and political opportunities. Gender refers to societal norms and practices about appropriate male and female behaviour, attributes and roles. It is a social and cultural construct that differentiate men from women and prescribes the ways in which men and women interact with each other in the society (Gupta, 2000). Gender is the word used to describe social and personality differences between women and men; it refers to that which society defines as masculine and feminine (Sani & Baba, 2013) Gender disparity therefore connotes the inequality that exists between men and women in relation to access to and utilisation of resources for a better life (Idyorough, 2005). Numerous studies have identified gender as one of the factors that explain academic performance (Bagamery, Lasik, & Nixon, 2005; Black,& Duhon, 2003; Gracia,& Jenkins, 2002).

(Neimanis,& Tortisyn 2003) highlighted key manifestation of worldwide gender inequalities as follows: two thirds of the world's 876 million illiterates are females; of the world's one billion poorest people, an estimated three-fifths are women and girls; despite the fact that the majority of the world's poor are women and girls, poverty reduction

strategies insufficiently address the differential impact of poverty by gender and inadequately target gender equality as a core objective; women represent a growing proportion of people living with HIV/AIDS. In countries with high HIV prevalence, young women and girls with little or no education are at much higher risk of contracting HIV than their male counterparts; in only 16 countries in the world is women's representation in national parliaments above 25 per cent. On average, they accounted for 11 per cent of parliamentarians worldwide in 1999, compared with 9 per cent in 1987; whereas women's contributions to the global economy are growing rapidly, women's labour remains undervalued and under counted in national accounts, data disaggregated by sex are still poorly developed; an estimated one-quarter to one half of all women has suffered physical abuse; and women and children comprise about 80 per cent of the world's 35 million refugees and displaced people, and they are particularly vulnerable to sexual violence while in flight, in refugee camps and/or during resettlement.

According to (Randell, & Gergel, 2009), striking differences have been observed between female and male enrolment, with a wider gap at tertiary level. This situation leads to questionable continuity in female education at tertiary level. The World Bank (2003) buttressed the view of (Neimanis, & Tortisyn (2003). According to the organisation: in most countries, women continue to have less access to social services and productive resources than men; women remain vastly under-represented in national and local assemblies, accounting for less than 10 per cent of the seats in national parliaments on average; In most low-income countries, girls are less likely to attend school than boys. Even when girls start school at the same rate as boys, they are more likely to drop out (in many cases after getting pregnant, often due to lack of access to reproductive health services; and in industrial countries, women in the wage sector earn an average of 77 per cent of what men earn; in developing countries, they earn 73 per cent. In contemporary Nigeria, women continue to be politically marginalised in the National Assembly and all the States House of Assemblies. The proportion of women among federal minister is usually less than 25%. There is yet no executive governor among the 36 governors who is a woman (National Bureau of Statistics [NBS], 2011). A recent assessment of women's lives and challenges across the world by (Head, Zweimuller, Marchena and Hoel, 2014), indicates that gender disparity remain a global social concern. The authors stressed that resources for empowerment are still significantly distributed unequally between men and women. Gender continues to play a major role in determining who goes to school, how well they do, and how far they progress. Being female is negatively associated with enrolment, attainment and performance in the educational system. According to (Akinbi, & Akinbi, 2015) in all low-income countries, male exceed female in their participation in formal education, in terms of access, persistence and achievement.

### **Statement of Problem**

Several studies have shown that there is no gender equity in tertiary institutions in Africa, and there is need to ensure adequate representation of women in higher education (Assie-Lumumba, 2006). To enhance women's contribution to human progress, the millennium declaration adopted in September 2000 at the United Nations Millennium

Summit committed member nations to promote gender equality and women empowerment as integral aspects of genuine sustainable development. The millennium declaration was reflected in the Millennium Development Goals (MDGs), which are a set of 8 goals, 18 targets and 48 indicators. The MDG 3 specifically addresses gender equality. One fundamental resource to eradicating gender disparity in education, Education is crucial to improving women's lives because it is the foundation of several other opportunities. In assessing progress towards the attainment of MDG 3, it is important to examine current state of gender disparity at all levels of the educational sector in Nigeria.

In consonance with the Federal Government project of re - branding the country, the educational system in the country must be re - branded to conform to global yearnings for gender equality.

According to Professor Dora Akunyili, the onetime minister of information and communication as cited in (Amaefule, & Abioye, 2009) re - branding Nigeria is fundamental to our national development. In cognizance of the importance of education to tackling gender disparity, studies in Nigeria have paid research attention to disparity in enrolment and out-turn for different educational programmes (Okojie, 1998; Solanke, 2004a; Solanke, 2004b; Igbiniedion, 2011), however, gender disparity in the enrolment for the Accountancy programme has been insufficiently studied. This study addresses the limitation by focusing on the Accountancy programme in Nigerian Federal Polytechnics. It is against this backdrop; the objective of this paper is therefore to examine gender inequality in enrolment for Accountancy programme in Nigerian Federal polytechnics and to discuss its implications for MDG 3 and the re - branding of the Nigerian educational system.

## **LITERATURE REVIEW**

The study by Gracia and Jenkins (2003) examined the second and final year accounting and finance students' performance at a Welsh university. The authors found that at second year level, gender was positively associated with performance whilst age was negatively associated. In Nigeria, gender disparity in adult literacy remains significant. As observed by the NBS (2011), while the country has made outstanding gains on enrolment of girls and boys in primary schools, the country is still far from attaining universal primary education, while there is still a wide gap at the secondary and tertiary levels of education.

Okafor and Egbon (2011) examined two accounting courses' grades of first year university students in Nigeria and concluded that there was no significant difference between academic performance of male and female. They however found that males' mean performance in both courses was higher than that of their female counterparts. Deepak et al. (2011) study shows that female medical students outperform male students in overall test assessment. Although Deepak et al.'s study suggests an evidence of male dominance in enrolment proportion, but female students were dominant in performance. Similar evidence of female students outperforming male students was also found in the field of agricultural science (Hedjazi, & Omididi, 2008). These evidences do suggest that females are not intellectually dwarf and are likely to encourage female enrolling on courses that have over time enjoyed masculine dominance

Onokala and Onwurah (2001) found that gender inequity is an issue in all faculties in Nigerian universities, implying that undergraduate student enrolment in Nigerian universities is not equally distributed between the sexes. They noted that in Nigerian universities, the highest percentages of female enrolments were in the faculties of Science, Arts, Education and Social Science. However, their study found that males dominated in scientific and technical fields, which were most likely to lead to high paying and powerful positions.

## METHODOLOGY

This study is based on the analysis of secondary data. The statistics of students' enrolment for Accountancy programme in Nigerian Federal polytechnics for six academic sessions were extracted from 2011 and 2012 editions of the Annual Abstract of Statistics published by the National Bureau of Statistics (NBS). The validity of the data from the NBS is not in doubt since the organization is not only the apex statistical body in the country, but also the custodian of all national and official statistics in the country. The data obtained for the study are as presented in Tables 1 and 2. Descriptive and inferential statistical methods were applied in the study and regression was used to run the analyses. Sex ratio computed as males/females X 100 was calculated for each session to quantify and assess the gender dimension of enrolment. The chi-square statistic was used to examine associations between gender and enrolment trends. However, data for 1994/1995 and 1999/2000 sessions were not available and therefore not part of the analysis. These analytical tools are appropriate for the study and have been applied in previous gender and enrolment studies (Solanke, 2004a; 2004b; Igbinedion, 2011).

## RESULTS

**Table 1: Enrolment for Accountancy Programme in Nigerian Polytechnics by Gender and Level of Study**

Session	National Diploma			Higher National Diploma			All (Both Sexes)

Source: Annual Abstract of Statistics, 2011, 2012, National Bureau of Statistics

Results as shown in Table 2, the sex ratios show an inconsistent pattern in general enrolment for Accountancy programme. In all the sessions examined, males are consistently more than females. The sex ratio has however declined from 223 in the 1990/91 session to 141 in the 2003/2004 session.

**Table 2**

Session	National Diploma			Higher National Diploma			All (Both Sexes)		
	Male % Increase	Female % increase	Sex ratio	Male % Increase	Female % increase	Sex ratio	Male % Increase	Female % increase	Sex ratio
1990/1991			213.4			254.5			222.7
1991/1992	0.4	-88.8	191.5	26.5	51.5	212.4	7.2	20.9	197.4
1992/1993	25.9	23.6	195.0	75.0	78.3	208.4	41.0	39.3	199.9
1993/1994	36.6	30.2	204.6	41.5	32.0	223.4	38.5	30.8	211.7
1995/1996	-26.0	-11.8	183.9	3.0	-0.7	231.6	-11.5	-8.2	202.8

1997/1998	42.0	27.2	235.9	8.8	0.6	183.7	26.7	38.7	212.1
1998/1999	-8.81	47.9	145.5	-21.1	-5.7	153.6	-13.7	23.4	148.3
2000/2001	12.8	35.6	120.4	16.5	21.5	147.3	13.7	30.7	129.1
2001/2002	45.7	32.9	131.9	32.0	36.6	142.3	41.0	34.1	135.4
2002/2003	-30.4	-22.9	119.2	-30.9	-23.9	129.3	30.5	-23.2	122.5
2003/2004	9.7	-5.0	137.6	4.4	-8.7	147.7	7.8	-6.2	140.8
2005/2006	15.9	-3.5	165.1	-10.6	-1.0	133.4	7.0	-2.7	154.9
2006/2007	0.5	-31.0	123.4	4.7	3.4	135.1	-33.6	-19.9	128.3
2007/2008	-19.9	-25.2	132.3	-26.1	-27.7	138.1	-22.6	-26.2	134.6
2008/2009	-17.5	-17.2	131.8	-9.3	-14.6	146.7	-14.0	16.2	138.0
2009/2010	1.8	14.7	117.1	-55.9	-46.2	120.4	-23.8	-10.8	117.9
2010/2011	39.0	36.0	119.8	293.9	263.3	130.5	104.6	93.2	124.9

More females are consistently enrolled at the National Diploma level than the Higher National Diploma level. Results further show that the pattern of annual changes in overall enrolment is inconsistent. There were declines in total enrolment in some sessions such as 1995/96, 1998/99 and 2002/2003 sessions.

**Cross Tabulation of Gender and Enrolment at ND Level**

Enrolment by academic sessions for National development											
Gender	05/06	06/07	07/08	08/09	09/10	10/11	Total	Df	X2	Critical Value	Conclusion
Male	14297	7364	5902	4872	4961	6897	44293	5	342	11.07	Significant association
Female	8653	5967	4872	3696	4236	5757	32775				
Total	22950	13331	3696	8568	9197	12654	77068				

**Cross tabulation of Gender and Enrolment at HND Level**

Enrolment by academic sessions for Higher National development											
Gender	05/06	06/07	07/08	08/09	09/10	10/11	Total	Df	X2	Critical Value	Conclusion
Male	5544	5807	4292	3893	1718	6767	2801	5	27	11.07	Significant Association
Female	4155	4298	3108	2654	1427	5185	20827				
Total	9699	10105	7400	6547	3145	1195	4888				

Findings show that in all academic sessions examined, males are consistently more in enrolment than females; at the ND level, significant association exists between gender and enrolment ( $\chi^2 = 343, p < 0.05$ ); at the HND level, gender and enrolment are significantly associated ( $\chi^2 = 27, p < 0.05$ ); at the HND level.

**DISCUSSION**

With consistent enrolment of more males than females in the Accountancy programme, the prospects of MDG of eliminating gender disparity in all levels of education needs additional efforts to quicken the process. With enrolment already in favour of males, deliberate efforts are needed to boost female enrolment. The findings of this study concur with findings of previous studies, such as (Bagamery, Lasik, & Nixon, 2005; Black, & Duhon, 2003; Gracia, & Jenkins, 2002) on gender differences in enrolment for accounting programme in tertiary institutions.

Greater enrolment of females will lead to growth in future share of women in wage employment in the non-agricultural sector in addition to increasing the future size of women accountants. There is now increasing understanding that educational programmes that fail to consider gender inequality and fail to address disparities between males and females will have limited effectiveness and cost implications. The enrolment of more females at the ND level than the HND level implies that many of the female students may have faced obstacles in continuing studies at the HND level. This may be because of early marriage, unwanted pregnancies and childbearing. This has contributed to the under representation of women at top managerial level. Appropriate interventions must be developed to enhance the access of women to higher education. As noted by the World Bank (2003), evidence from around the world shows that eliminating gender disparities in education is one of the most effective development actions a country can take.

The federal government of Nigeria through the National Policy on Education (2004) also noted that education is an instrument for national development. It is therefore important that efforts to rebrand the Nigerian educational system must bring a gender perspective across the whole range of the rebranding process. This will further enhance the ability of the educational system to achieve its set goals. For instance, according to the National Board for Technical Education (NBTE) in 1990, the ND and HND Accountancy programmes should contribute adequately to the production of good quality and dedicated business manpower for commerce, industry, private and public enterprise. The more women that are highly educated and opportune to fill such skilled manpower positions, the greater are the benefit to the nation and the contribution of womenfolk to sustainable development of the nation.

## CONCLUSION

This paper has examined gender disparity in enrolment for Accountancy programme in Nigerian federal polytechnics. Results of the analysis show that at both the ND and HND levels more males are enrolled than females. In order to minimize the serious implication this trend portends for women status in the country, it is important that efforts to transform the Nigerian educational system must bring a gender perspective across the whole range of the transformation process. This will further enhance the ability of the educational system to achieve its set goals. The more women that are highly educated and opportune to fill skilled manpower positions, the greater are the benefits to the nation and the contribution of womenfolk to sustainable development of the nation. It is therefore important that contemporary initiatives to close gender gaps in all spheres of the national life must take note of the level of gender disparity in enrolment for programmes in the tertiary institutions in the country and take concrete steps to eliminate the disparity.

## RECOMMENDATION

It is important that current efforts to rebrand the educational sector must take cognizance of the level of disparities between males and females for all programmes at the tertiary education level, and devise means of bridging the gender gap. This is the only way by which the millennium goal for eliminating gender disparity at all levels of the educational sector can be achieved in the country. Further studies may focus on student enrolment in Accountancy programme in state and private institutions respectively as these areas have not been exploit
